# **Bencox Mirabo Cup**

#### **Surface Treatment**

#### **TPS Coating**

The microporous pure titanium coating with pores of 50-200µm diameter and more than 30% porosity leads to direct bone apposition for secondary stability.

Mag. 100x

#### **Laser 3D Coating**

Laser 3D coating technique produces layers of titanium powder using laser beam. The coating with pores of 200-500µm diameter and 70% porosity leads bone-in-growth. High roughness of Laser 3D coating allows about 1.4 times stronger initial fixation than Ti Plasma Spray coating.

Mag. 100x

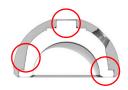

## **Secure Locking Mechanism**

- Taper to prevent micro-motion

## **Locking with Ceramic Liner**

Cup and ceramic insert provides a secure taper locking mechanism while providing a self-locating feature to ease insert placement.

- Post to resist tilting
- Taper to prevent micro-motion
- 12 tabs to resist tilting, push-out and rotation

#### **Locking with PE Liner**

The locking mechanism between cup and PE liner allows for secure fixation with superior congruency for the push-out, rotation and tilting.

#### Various choice of PE liner

Various choice for standard and 10°, 15°elevated types allows for the use in extended indication situations.
