Bencox® ID Stem

Bencox ID Stem Specifications

Size	Length (mm)	Offset (mm)	CCD (degree)	Rasp
1	137	37.4		1
2	141	38.1		2
3	145	39.3		3
4	149	40.0		4
5	153	40.7		5
6	157	41.4	132°	6
7	161	42.1		7
8	165	43.3		8
9	169	44.5		9
10	173	45.7		10
11	177	46.9		11

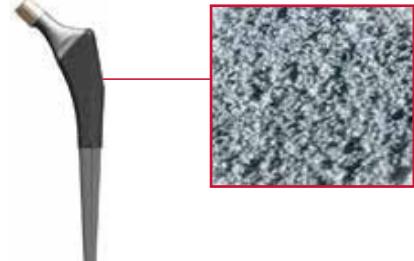

Unified Instrumentation

- Cementless and cemented stem of ID system use same instrumentation.
- This instrumentation maximizes efficiency in the operating room, while still providing intraoperative flexibility.

Proven Ti-Plasma Spray Porous Coating

- Clinically proven Ti-Plasma spray porous coating**
- Provides the primary and secondary stability.
 - Protects osteolysis from the wear debris.

Wide Range of Prosthetic ROM(P-ROM)

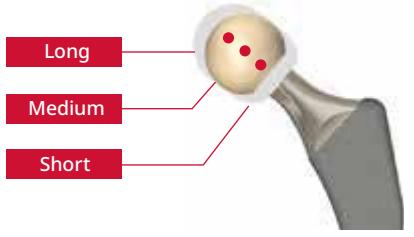

Enhanced neck shape

- Patented trapezoidal neck design allows wide angulation and protects impingement & dislocation.
- Same neck design with Bencox Stem is applied.

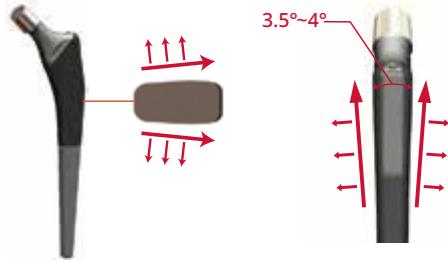

Compatible Tapered 12/14 Trunnion

- Adoption of Bencox Forte & Delta, and Metal heads
- Provides 3 optional offset(Short, Medium, Long).
- Extra long offset provided for Metal heads

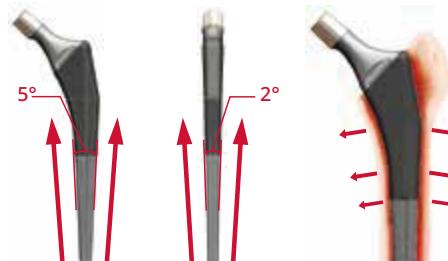

Normalized Proximal Stress

- Proximally tapered stem geometry converts the shear forces to compressive load.
- This helps the stem to resist subsidence and medial migration.

Extensive Stress Distribution

- Low elastic modulus of Ti alloy and the double tapered stem reduce stiffness which avoids distal load transfer and prevents proximal stress shielding.

Enhanced Rotational Stability

- Rectangular cross-section
- Longitudinal grooves
 - Longitudinal grooves are designed to resist rotational motion.
